

AI WORKSPACE

I want to explore whether AI should be used in schools.

Let's start by exploring the different perspectives involved. Who are the stakeholders, and what do they each value?

Teachers, students, parents, and administrators all have stakes.

Great starting point. Let's build out a perspective for each — beginning with the one you feel least certain about.

Ask, explore, or build a thought...

HOUSE WORKSPACE

- Equity safeguards and FERPA-compliant procurement are essential to prevent widening gaps.

REASONING SUMMARY

Across all six perspectives, evidence converges on net benefit when guardrails exist (supervision, training, compliant procurement, opt-outs). Where guardrails are absent, risks of dependency, inequity, and privacy breaches grow quickly enough to erase the gains.

IMPLICATIONS

8 implications identified

HIDE

POSITIVE

- Personalized tutoring at scale, especially for students with disabilities and ELLs
- Meaningful reduction in teacher prep and feedback time
- Stronger workforce readiness for AI-fluent roles

NEGATIVE

- Erosion of independent writing and reasoning skills if unsupervised
- Widening digital divide between high- and low-funding districts
- Compliance and liability exposure under student-privacy laws

UNCERTAIN

- Long-term impact on critical-thinking habits beyond a 1–2 year horizon
- Whether free AI tools will close or widen the access gap
